An instructor wants to use two standardized exams in her classes next year. This year, she randomly selects sixteen students from her sections of a large lecture course and asks them to "test pilot" the two exams. She wants to know if the exams are equally difficult and decides to check this by looking at the differences between students' scores. If the mean difference between scores for students is "close enough" to zero, she will make a practical conclusion that the exams are equally difficult.

| Student | Exam 1 Score | Exam 2 Score | Difference |
|---------|--------------|--------------|------------|
| Bob | 63 | 69 | 6 |
| Nina | 65 | 65 | 0 |
| Tim | 56 | 62 | 6 |
| Kate | 100 | 91 | -9 |
| Alonzo | 88 | 78 | -10 |
| Jose | 83 | 87 | 4 |
| Nikhil | 77 | 79 | 2 |
| Julia | 92 | 88 | -4 |
| Tohru | 90 | 85 | -5 |
| Michael | 84 | 92 | 8 |
| Jean | 68 | 69 | 1 |
| Indra | 74 | 81 | 7 |
| Susan | 87 | 84 | -3 |
| Allen | 64 | 75 | 11 |
| Paul | 71 | 84 | 13 |
| Edwina | 88 | 82 | -6 |

Use JMP to answer the following questions.

1. Find a 99% confidence interval for the mean difference in exam scores.

2. Test whether there is a significant difference between the exam scores at the 0.01 level.
